

Gassiot House, St Thomas' Hospital, London, 2012

Architect: BMJ Architects
Contractor: ME Construction

What was originally an external courtyard was to be transformed into a new outpatient centre.

With previous experience of the JUPITER product range and a very tight program the contractor elected to use the IDEAL EPS system with the Screed Replacement Tile as substrate.

The primary insulation and underfloor heating panels were installed within 1 week.

Installation of the 465m² Screed Replacement Tiles took just under two weeks – drying time 1 day.

Once installed, the Screed Replacement Tiles were levelled with a latex compound in readiness to accept the vinyl floor finish.

The completed new outpatient centre with vinyl floor finish.
