

Pitshill House, Sussex, 2012

Architect: Christopher Smallwood
 Engineers: Bob Costello Associates
 Contractor: Kier

Pitshill House is a Grade II listed building designed and built in the 18th century by John Upton with later contributions from Sir John Soane.

Having worked with both the architects and the consulting engineers before, JUPITER was approached to design, supply and install the underfloor heating throughout the building.

With average 400mm centred existing joists it was possible to install 3 pipes in per void resulting in optimum heat output.

As all bathrooms were to have stone floors the Screed Replacement Tile was specified to provide high heat output and a stable substrate.
